Oil Feeder Pipelines are massively leaving ecological foot prints cutting through Arable Land, Community farm and bush lands all the way from Murchison Falls National Park into Buliisa District.

A young farmer in Kigwera village Bullisa District sighted struggling to feed his goats along the EACOP line due to the fact that the pasture grounds for grazing were interrupted during the pipeline construction process.

The effects of the EACOP project on Agro Ecology & livelihoods in Uganda

In Kasenyi village, Buliisa District, the construction of the Tilenga Central Processing Facility (CPF) by TotalEnergies and its partners has led to severe flooding and the destruction of local community gardens. Large-scale deforestation and earth-moving activities altered natural waterways, causing stormwater runoff to submerge farmlands, damage livelihoods, and contaminate local water sources.

A farmer in Kasenyi, Buliisa District, inspects the maize garden that was swept and covered by soil erosion resulting from flooding due to large scale deforestation and earth moving activities and excavations along the Tilenga Central Processing Facility (CPF). And there was no evidence of compensation plans
